

Fast Rope Assembly

Optimised rapid deployment and retrieval

Jeyco's Fast Rope Assemblies have been designed to enhance rapid controlled descent from hovering aircraft. They are fabricated using specialist high strength, high grip swarming material for controlled comfortable descent and eliminate the need for heavy steel hardware connections with a specialist integrated Plasma headpiece.

The complete lightweight Fast Rope Assembly is a non-rotating fibre construction making rapid descent safer and with no heavy steel fittings the rope can be jettisoned without harm to personnel.

This system, identified by specific NATO part numbers, has been rigorously tested and proven over many years by the Australian Defence Forces, Australian Police and various other Special Forces throughout the wider Australasian region.

For more information on this high-performance Fast Rope system, contact Jeyco Australia directly.

FEATURES

- Lightweight non-rotation construction, easy-to-handle
- Advanced Plasma HMPW crown eliminating steel hardware
- Offered in fully customisable lengths, standard lengths from 60' to 90'
- Colour: Olive with purple crown
- Full Certification, inspection and technical support offered by Jeyco Australia
- NATO Approved part numbers
- Customer carry bags available
