

Fast Ropes – Helicopter Ropes

Jeyco's Fast Rope Assemblies have been designed to enhance rapid controlled decent from hovering aircraft. They are fabricated using specialist high strength, high grip swarming material for controlled comfortable decent and eliminate the need for heavy steel hardware connections with a specialist integrated Plasma headpiece.

The complete lightweight Fast Rope Assembly is a non-rotating fibre construction making rapid decent safer and with no heavy steel fittings the rope can be jettison without harm to personnel.

This system, identified by specific NATO part numbers, has been rigorously tested many years by the Australian Defence Forces, Australian Police and various other throughout the wider Australasian region.

Features

- Lightweight non-rotational construction, easy to handle
- Colour: olive with purple crown
- Advanced Plasma HMPE crown eliminating steel hardware
- NATO approved part numbers
- Offered in fully customizable lengths, standard lengths from 60' to 90'
- Custom carry bags available
